# Introduction

## Problems:

- **Sharing && Mutability!**

## Solutions:

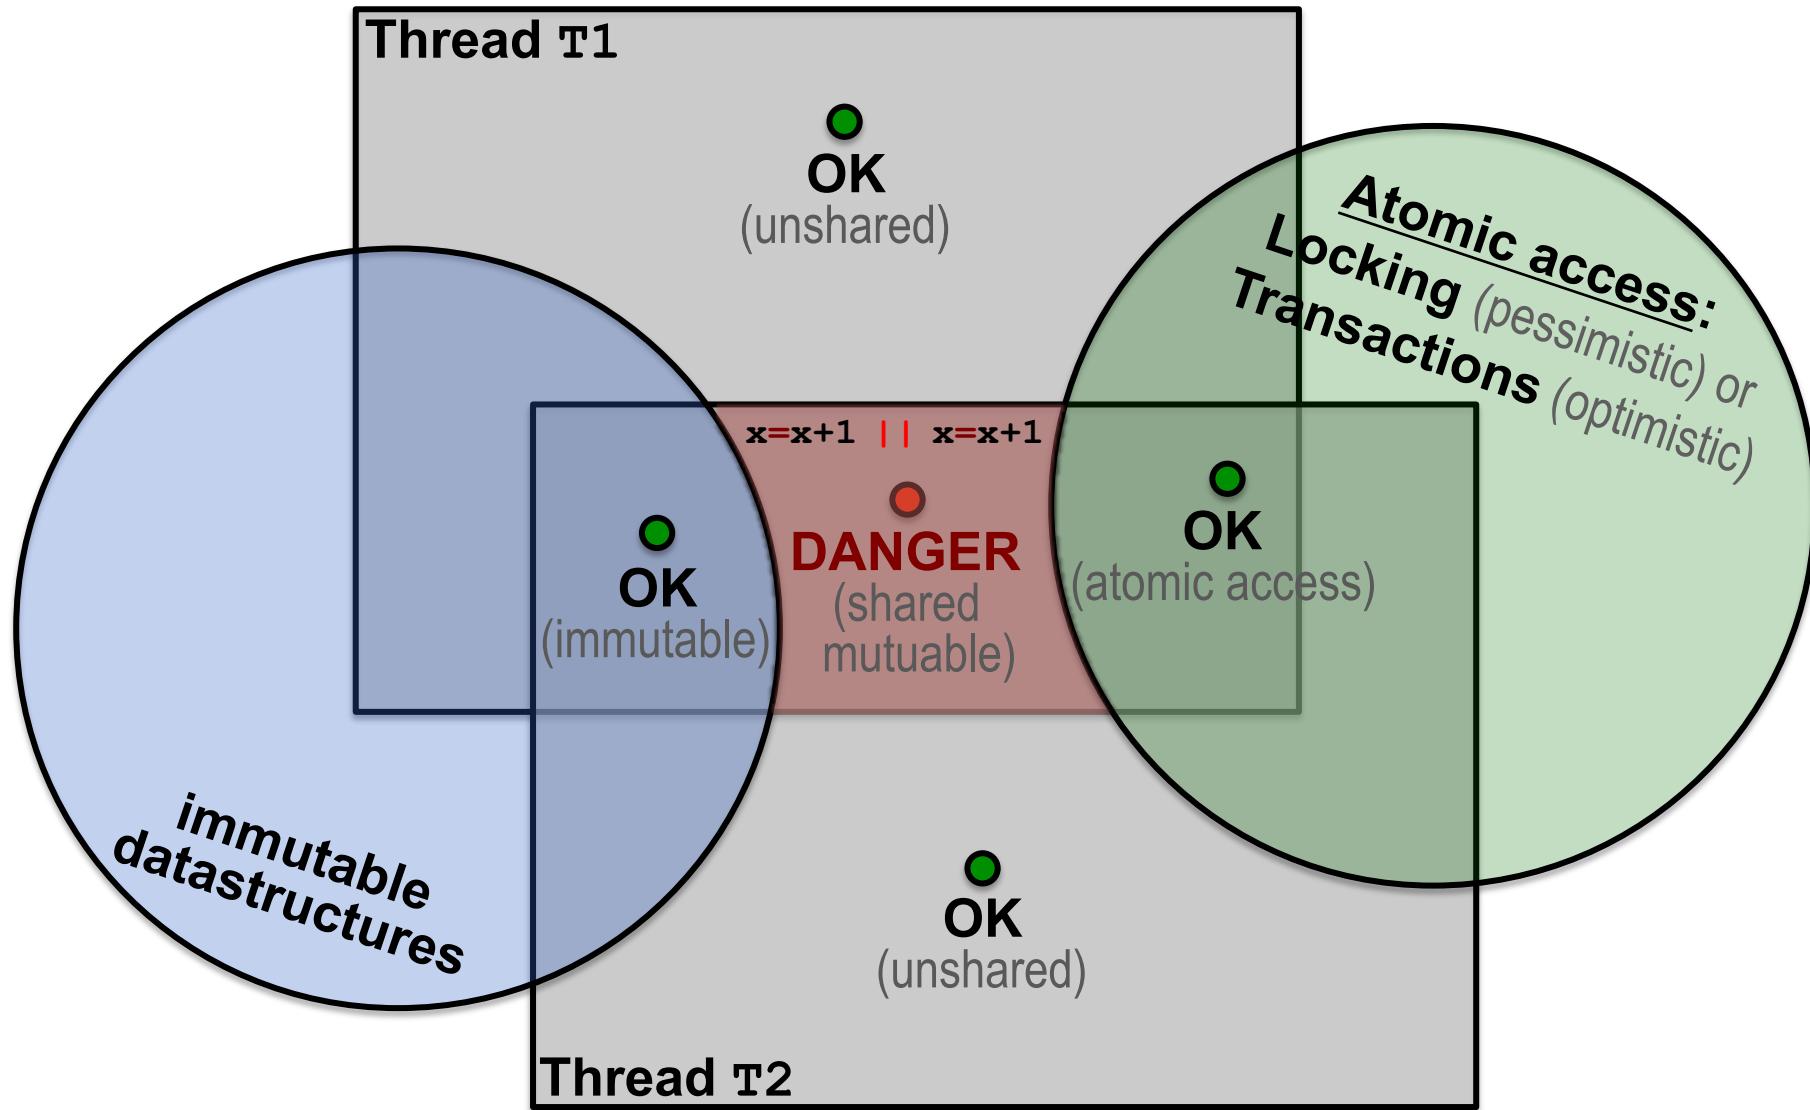

- **1) Atomic access (shared res.):** "synchronized"
  - Locking (pessimistic -concurrency) & Transactions (optimistic-)
    - NB: avoid deadlock!
- **2) Eliminate mutability:** "final"
  - E.g., functional programming
- **3) Eliminate sharing...:** *message passing concurrency*

# **PROBLEMS:**

## **Sharing && Mutability!**

### **SOLUTIONS:**

- 1) atomic access!  
locking or transactions  
NB: avoid deadlock!
- 2) avoid mutability!
- 3) avoid sharing...

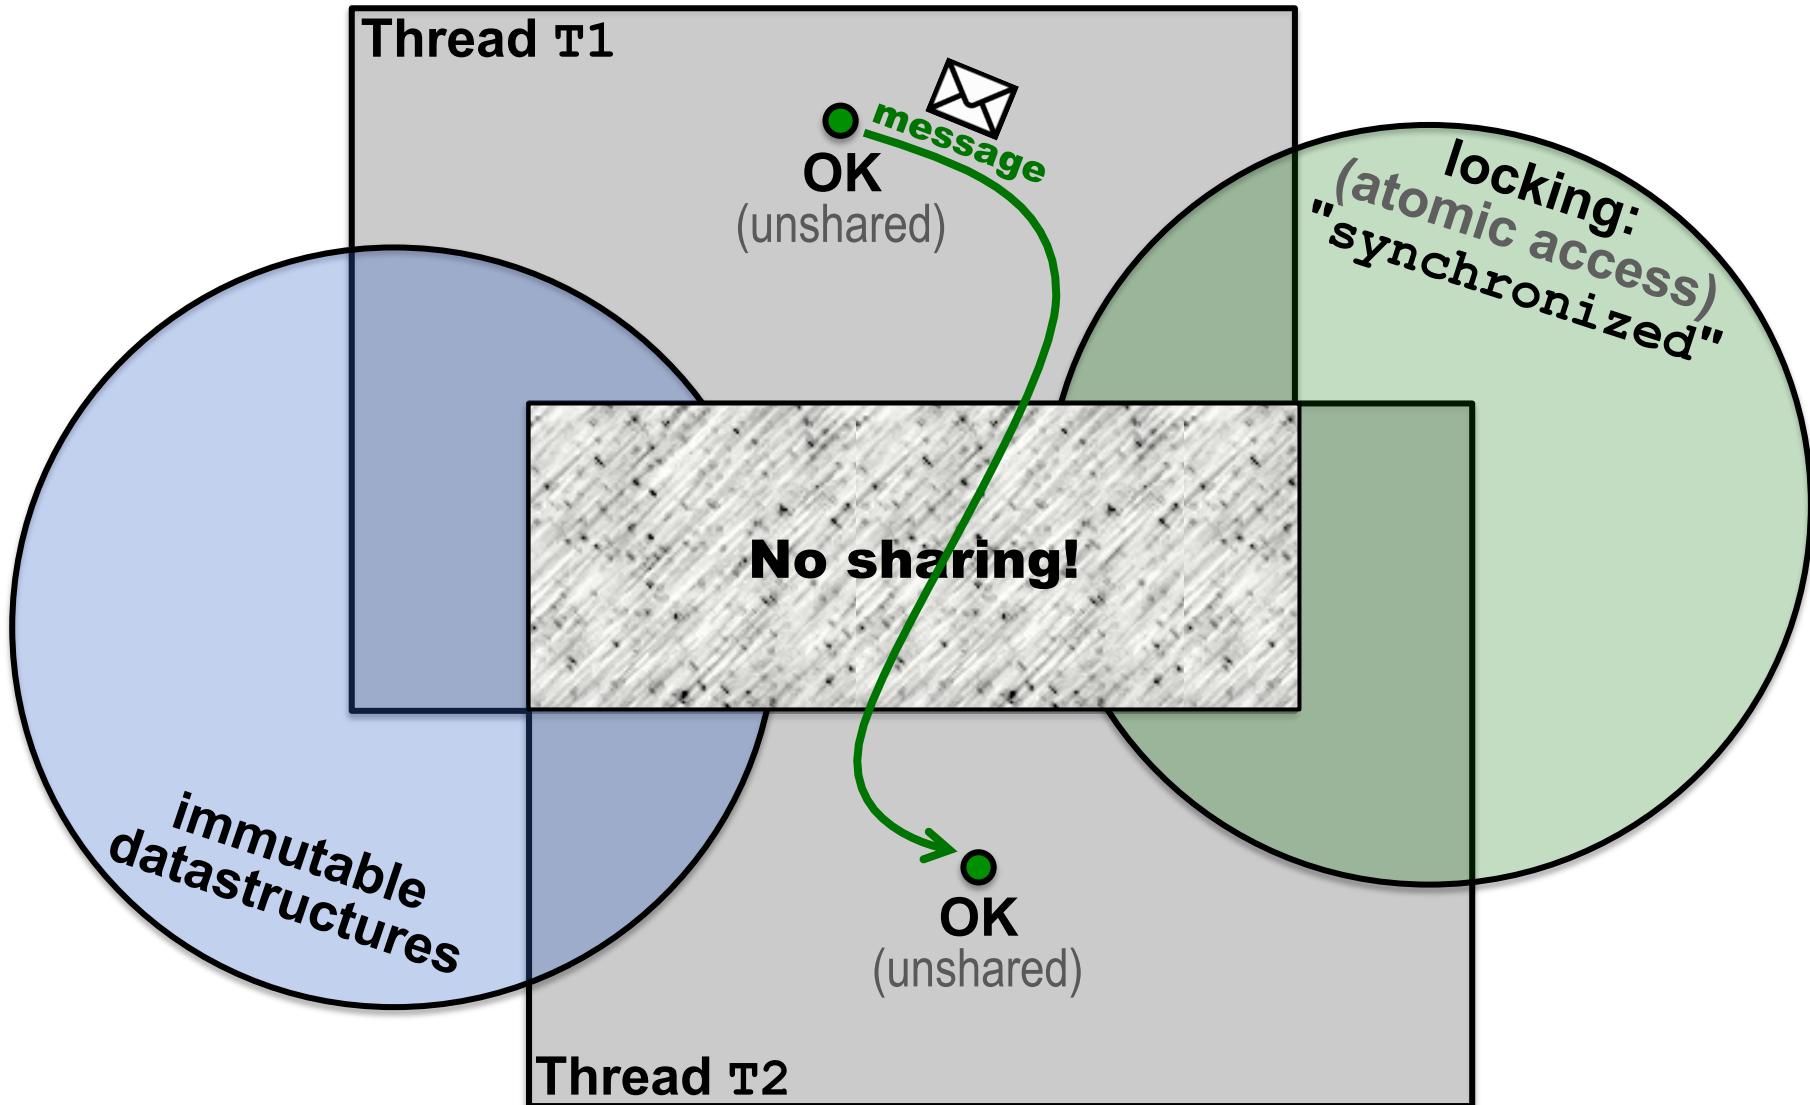

# **PROBLEMS:**

## **Sharing && Mutability!**

### **SOLUTIONS:**

- 1) atomic access!  
locking or transactions  
NB: avoid deadlock!
- 2) avoid mutability!
- 3) avoid sharing...

# World Wide Web...

In a **distributed setting**,  
there's **no shared memory**:

- Communication is achieved  
**via "message passing"**
  - (between concurrently executing servers)

## Message Passing Concurrency:

- Same idea (**message passing**)  
usable in non-distributed setting:
  - (between processes, inside a server)

# Forms of Message Passing

## ■ Operations:

- send and receive

## ■ Symmetry:

- symmetric (send and receive)
- asymmetric (send xor receive)

## ■ Synchronization:

- synchronous (e.g., phone)
- asynchronous (e.g., email)
- rendez-vous (e.g., barrier)

## ■ Buffering:

- unbuffered (e.g., blocking)
- buffered (e.g., non-blocking)

## ■ Multiplicity:

- one-to-one
- one-to-many (or many-to-one)
- many-to-many

## ■ Addressing:

- direct (naming processes)
- indirect (naming addresses)

## ■ Reception:

- unconditional (all messages)
- selective (only certain msgs)

## ■ Anonymity:

- anonymous
- non-anonymous

# Synchronous Msg Passing !

Send: `p.send(Value v, Process q);`

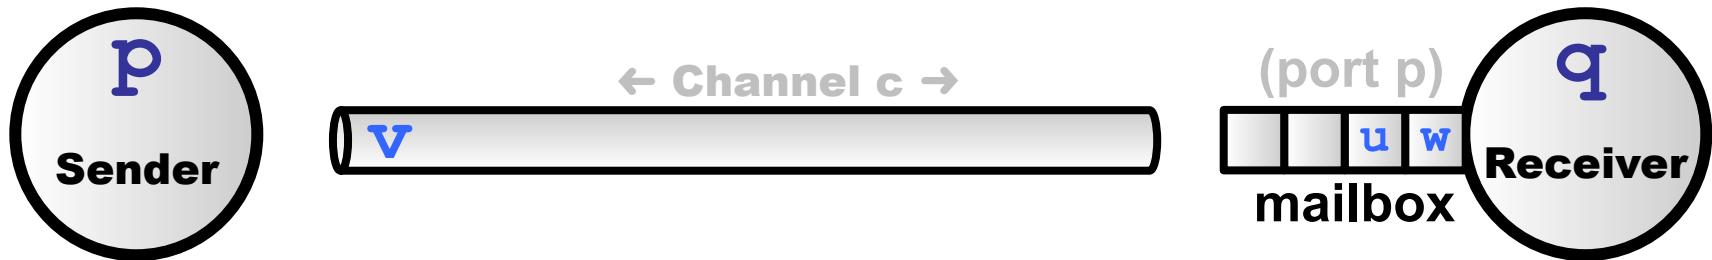

- Sender process **p** **sends** value **v** to receiver process **q**
- Sending process **p** **blocked** until process **q** receives **v**

Receive: `Value receive();`

- Receiver process **q** attempts to **receive** a value **v**
- Receiver process **q** is **blocked** until some value is sent

■ **Synchronous** (i.e., no message buffering)!

# Asynchronous Msg Passing !

Send: `void send(Value v, Process q);`

- Sender process **p** **sends** value **v** to process **q**'s mailbox
- Sending process **p** **continues after sending**

Receive: `Value receive();`

- Receiver process **q** attempts to **receive** **v** from its inbox
  - Receiver process **q** is **blocked** until inbox is non-empty
- **Asynchronous** (i.e., messages are buffered)!

# Philosophy & Expectations !

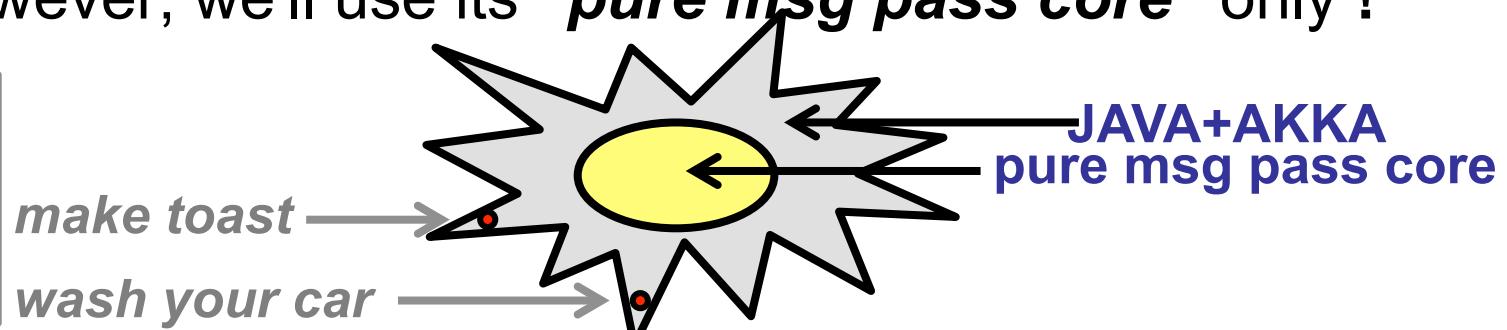

## ■ ERLANG:

- We'll use as message passing *specification language*
- You have to-be-able-to *read* simple ERLANG programs
  - (i.e., not *write*, nor *modify*)

## ■ JAVA+AKKA:

- We'll use as msg passing *implementation language*
- You have 2-b-a-2 *read/write/modify* JAVA+AKKA p's
- However, we'll use its "*pure msg pass core*" only !

NB: we're not going to use all of its fantazilions of functions!

# An ERLANG Tutorial

***"Concurrent Programming in ERLANG"***

( Joe Armstrong, Robert Virding, Claes Wikström, Mike Williams )

[ Ericsson 1994 ]

# ERLANG

---

- Named after Danish mathematician  
**Agner Krarup ERLANG:**

...credited for inventing:

- ***traffic engineering***
- ***queueing theory***
- ***telephone networks analysis***

[ [http://en.wikipedia.org/wiki/Agner\\_Krarup\\_Erlang](http://en.wikipedia.org/wiki/Agner_Krarup_Erlang) ]

- The ERLANG language:

[ [http://en.wikipedia.org/wiki/Erlang\\_%28programming\\_language%29](http://en.wikipedia.org/wiki/Erlang_%28programming_language%29) ]

- by Ericsson in 1986      (Ericsson Language? :-)

# The ERLANG Language (1986)

- Functional language with....:
  - ***message passing concurrency !!!***
  - ***garbage collection***
  - ***eager evaluation***
  - ***single assignment***
  - ***dynamic typing***
- Designed by **Ericsson** to support...:  
*distributed, fault-tolerant, soft-real-time, non-stop applications*
- It supports "***hot swapping***":
  - i.e., code can be changed without stopping a system!

*"Though all concurrency is explicit in ERLANG, processes communicate using message passing instead of shared variables, which removes the need for explicit locks."*

-- Wikipedia

# Hello World

- Hello World  
(in ERLANG)

```
% hello world program:  
-module(helloworld).  
-export([start/0]).  
  
start() ->  
    io:fwrite("Hello world!\n") .
```

- Output:

```
Hello world!
```

- Try it out:

[ [www.tutorialspoint.com/compile\\_erlang\\_online.php](http://www.tutorialspoint.com/compile_erlang_online.php) ]

# Online ERLANG Compiler

- Online ERLANG Compiler:

- [ [www.tutorialspoint.com/compile\\_erlang\\_online.php](http://www.tutorialspoint.com/compile_erlang_online.php) ]

- Documentation:

- [ <http://www.erlang.org/doc/man/io.html> ]

- Simple usage:

- One module called: `helloworld`
- Export one function called: `start/0`
- Call *your code* from `start()` and `io:write` output

```
-module(helloworld).  
-export([start/0]).  
  
yourcode(...) -> ...  
  
start() -> Val = yourcode(...), % single assign: unchangable!  
          io:write(Val).           % NB: use fwrite for strings!
```

# Factorial

- Factorial  
(in ERLANG)

```
% factorial program:  
-module(mymath).  
-export([factorial/1]).  
  
factorial(0) -> 1;  
factorial(N) -> N * factorial(N-1).
```

- Usage:

```
> mymath:factorial(6).  
720
```

```
> mymath:factorial(25).  
15511210043330985984000000
```

- Try it out:

[ [www.tutorialspoint.com/compile\\_erlang\\_online.php](http://www.tutorialspoint.com/compile_erlang_online.php) ]

# Modularization: Import / Export

- Factorial  
(in ERLANG)

```
-module(mymath).  
-export([double/1]).  
  
double(X) -> times(X, 2). % public  
  
times(X, N) -> X * N. % private
```

- Usage:

```
> mymath:double(10).  
20
```

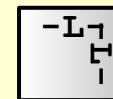

```
> mymath:times(5,2).  
** undef'd fun': mymath:double/2 **
```

- Try it out:

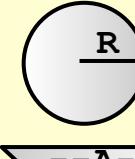

[ [www.tutorialspoint.com/compile\\_erlang\\_online.php](http://www.tutorialspoint.com/compile_erlang_online.php) ]

# Pattern Matching

```
-module(mymath).  
-export([area/1]).  
  
area( {square, L} ) ->  
    L * L;  
area( {rectangle, X, Y} ) ->  
    X * Y;  
area( {circle, R} ) ->  
    3.14159 * R * R;  
area( {triangle, A, B, C} ) ->  
    S = (A + B + C)/2,  
    math:sqrt(S*(S-A)*(S-B)*(S-C)).
```

%% patterns in purple!

%% immutable assignment

```
> Thing = {triangle, 6, 7, 8}.  
{triangle,6,7,8}  
> math3:area(Thing).  
20.3332
```

# Values (with lists and tuples)

- Numbers: 42, -99, 3.1415, 6.626e-34, ...
- Atoms: abc, 'with space', hello\_world, ...
- Tuples: {}, { 1, 2, 3 }, { { x, 1}, { 2, y, 3 } }
- Lists: [], [ 1, 2, 3 ], [ [ x, 1 ], [ 2, y, 3 ] ]

```
PCPP =  
  {course, "Practical Concurrent and Parallel Programming",  
   {master, 7.5, { fall, 2014 } }  
   { teachers, [ 'Peter Sestoft', 'Claus Brabrand' ] },  
   { students, [ aaa, bbb, ccc, ... ] }  
 }
```

String (really just  
list of characters)

- Recall: *dynamically typed*

# Lists: member/2

- **[H | T]** is (standard) "**head-tail constructor**":
  - **H** is the **head**; i.e., *the first element* (one element)
  - **T** is the **tail**; i.e., *the rest of the list* (zero-or-more)

```
-module(mylists).  
-export([member/2]).  
  
member( X, [] ) -> false;  
member( X, [X|_] ) -> true;  
member( X, [_|T] ) -> member(X, T).
```

*...for list  
construction  
de-construction*

```
> mylists:member(3, [1,3,2]).  
true
```

```
> mylists:member(4, [1,3,2]).  
false
```

# Lists: append/2

- `[H|T]` is (standard) "**head-tail constructor**":
  - `H` is the **head**; i.e., *the first element* (one element)
  - `T` is the **tail**; i.e., *the rest of the list* (zero-or-more)

```
-module(mylists).                                ...for list
-export([append/2]).                           construction
                                                de-construction
append( [], L ) -> L;
append( [H|L1], L2 ) -> [H|append(L1, L2)].    and re-construction
```

```
> mylists:append([], [a,b])
[a,b]
```

```
> mylists:append([1,2], [3,4])
[1,2,3,4]
```

# Actor: Send / Receive / Spawn

## ■ Send:

- `Pid ! M` // Message M is sent to process Pid
- `Pid ! {some, {complex, structured, [m,s,g]}, 42}`

## ■ Receive:

- ```
receive
    pattern1 -> ...
;
    pattern2 -> ...
end
```
- ```
receive
    {init,N} when N>0 -> ...
;
    {init,N} -> ...
end
```

## ■ Spawn:

- `MyActorId = spawn(mymodule,myactor,[a,r,g,s])`

# Order of Receiving Messages

## ■ Semantics:

```
for (M: message) {  
    for (P: pattern) {  
        M~P (i.e., M matches P)?  
    }  
}
```

*This is what happens inside each actor.*

## ■ Example:

mailbox:

m1	m2	m3	m4
----	----	----	----

mailbox:

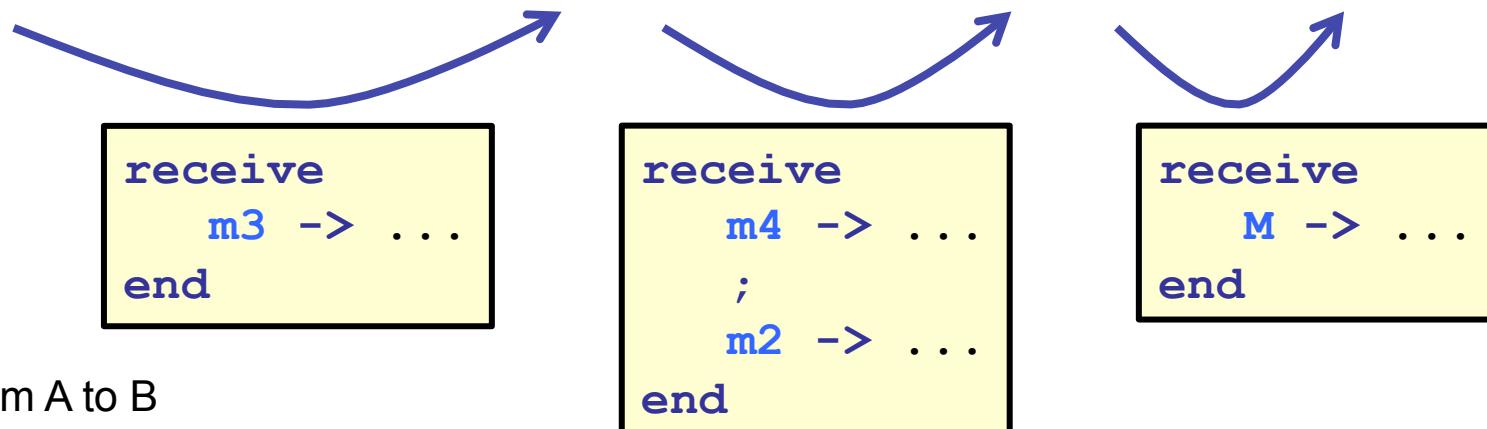

m1	m2	m4
----	----	----

mailbox:

m1	m4
----	----

mailbox:

m4
----

### Guarantee:

Msgs sent from A to B will arrive in order sent

# 5 Examples (ERLANG & JAVA+AKKA)

## 1) HelloWorld:

The "Hello World" of message passing; one message is sent to **one actor**.

## 2) Ecco:

A **person actor** sends a msg to an **ecco actor** that responds with three suffix messages (used for ye olde "hvad drikker møller" kids joke).

## 3) Broadcast:

Three **person actors** unsubscribe/subscribe to a **broadcast actor** that forwards subsequent incoming msgs to subscribed persons.

## 4) Primer:

An **actor primer** is created that when initialized with **N=7** creates a **list[]** of that many **slave actors** to factor primes for it. Main bombards the prime actor with msgs ( $p \in [2..100]$ ) that are evenly distributed among the slaves according to **list[p%N]**.

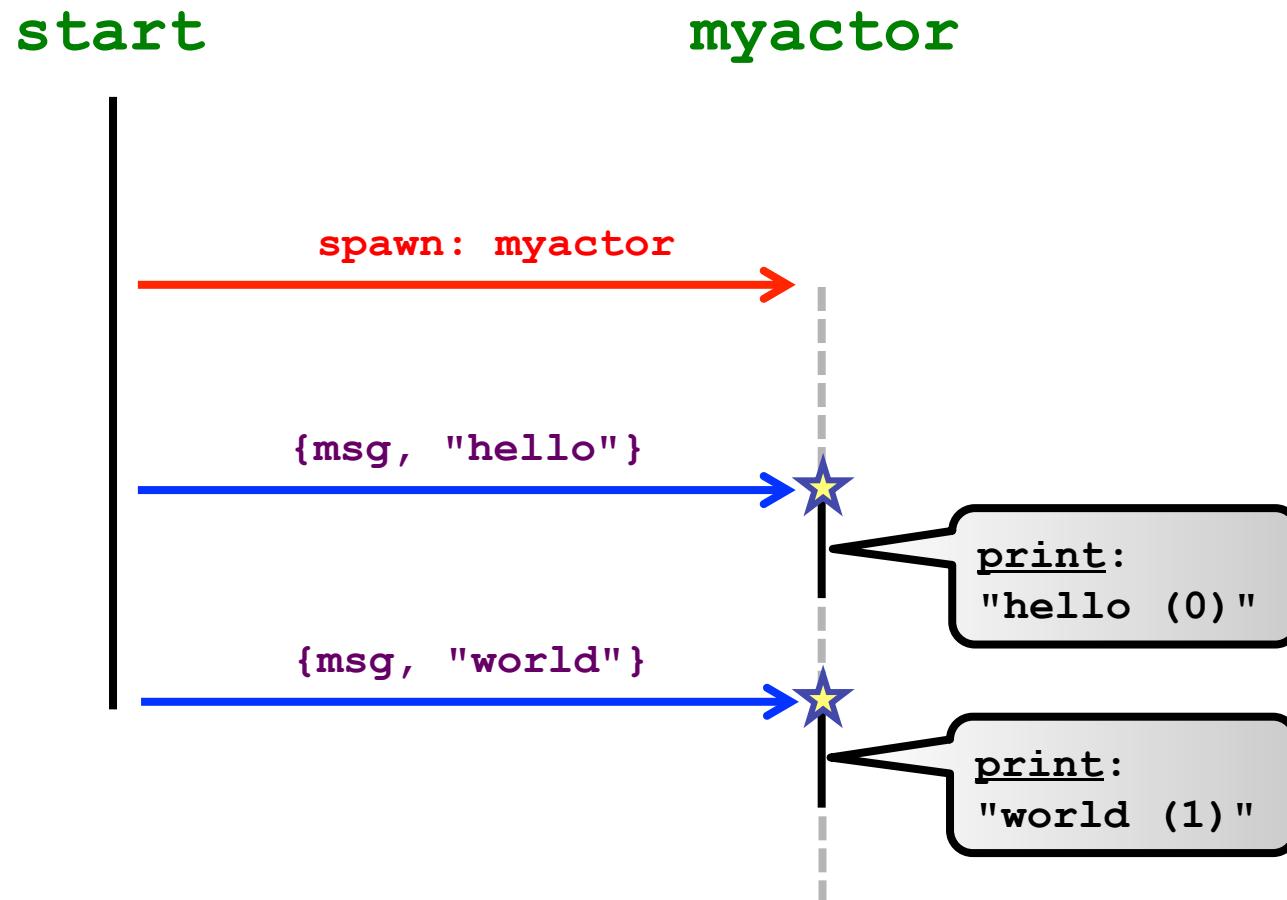

## 5) ABC:

[lecture-#06]

Two **clerk actors** each bombard a **bank actor** with 100 transfer-random-amount-x-from-an-account-to-other-account msgs. The banks transfer the money by sending deposit(+x) to one **account actor** and deposit(-x) to the other **account actor**. (The system is called ABC as in Account/Bank/Clerk.)

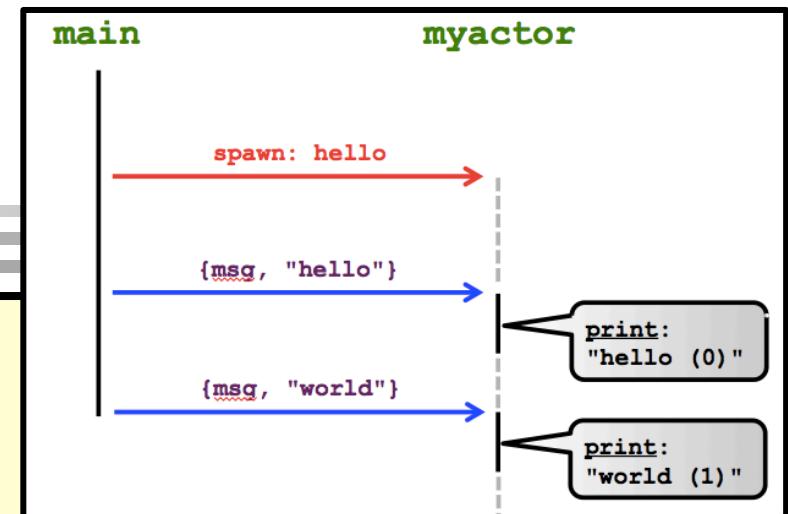

# 1) HelloWorld

**LEGEND:**  
**send, receive, msgs**  
**actors, spawn, rest.**

# 1) HelloWorld.erl

```
-module(helloworld).
-export([start/0,myactor/1]).  
  
myactor(Count) -> %% can have state  
    receive  
        {msg, Msg} ->  
            io:fwrite(Msg ++ " ("),  
            io:write(Count),  
            io:fwrite("\n"),  
            myactor(Count + 1)  
    end.  
  
start() ->  
    MyActor = spawn(helloworld, myactor, [0]),  
    MyActor ! {msg, "hello"},  
    MyActor ! {msg, "world"}.
```

hello (0)  
world (1)

# 1) HelloWorld.java

```

import java.io.*;
import akka.actor.*;

// -- MESSAGE
class MyMessage implements Serializable { // must be Serializable:
    public final String s;
    public MyMessage(String s) { this.s = s; }
}

// -- ACTOR ----

class MyActor extends UntypedActor {
    private int count = 0; // can have (local) state

    public void onReceive(Object o) throws Exception { // reacting to message:
        if (o instanceof MyMessage) {
            MyMessage message = (MyMessage) o;
            System.out.println(message.s + " (" + count + ")");
            count++;
        }
    }
}

```

In JAVA+AKKA,  
we want to pass  
immutable msgs

Otherwise,  
we're back to  
shared mutable!

```

sequenceDiagram
    participant main
    participant myactor
    main->>myactor: spawn: hello
    activate myactor
    main->>myactor: {msg, "hello"}
    deactivate myactor
    activate myactor
    main->>myactor: {msg, "world"}
    deactivate myactor
    myactor->>main: print: "hello (0)"
    myactor->>main: print: "world (1)"

```

hello (0)  
world (1)

# 1) HelloWorld.java

```
// -- MAIN -----
public class HelloWorld {
    public static void main(String[] args) {
        final ActorSystem system = ActorSystem.create("HelloWorldSystem");

        final ActorRef myactor =
            system.actorOf(Props.create(MyActor.class), "myactor");

        myactor.tell(new MyMessage("hello"), ActorRef.noSender());
        myactor.tell(new MyMessage("world"), ActorRef.noSender());

        try {
            System.out.println("Press return to terminate...");
            System.in.read();
        } catch(IOException e) {
            e.printStackTrace();
        } finally {
            system.shutdown();
        }
    }
}
```

In JAVA+AKKA,  
the `main()` thread  
is NOT an actor !

The diagram illustrates the execution flow. On the left, a box labeled 'main' contains the code. An arrow points from this box to a dashed line. On the right, a box labeled 'myactor' contains the code. The sequence of events is as follows:

- A red arrow labeled 'spawn: hello' points from the 'main' box to the 'myactor' box.
- A blue arrow labeled '{msg, "hello"}' points from the 'main' box to the 'myactor' box.
- A blue arrow labeled '{msg, "world"}' points from the 'main' box to the 'myactor' box.
- From the 'myactor' box, two arrows point to speech bubbles: one labeled 'print: "hello (0)"' and another labeled 'print: "world (1)"'.

hello (0)  
world (1)

# 1) HelloWorld.java

- **Compile:**

```
javac -cp scala.jar:akka-actor.jar HelloWorld.java
```

- **Run:**

```
java -cp scala.jar:akka-actor.jar:akka-config.jar:. HelloWorld
```

- **Output:**

```
hello (0)  
world (1)
```

## 2) Ecco

- From Old Danish Kids Joke:

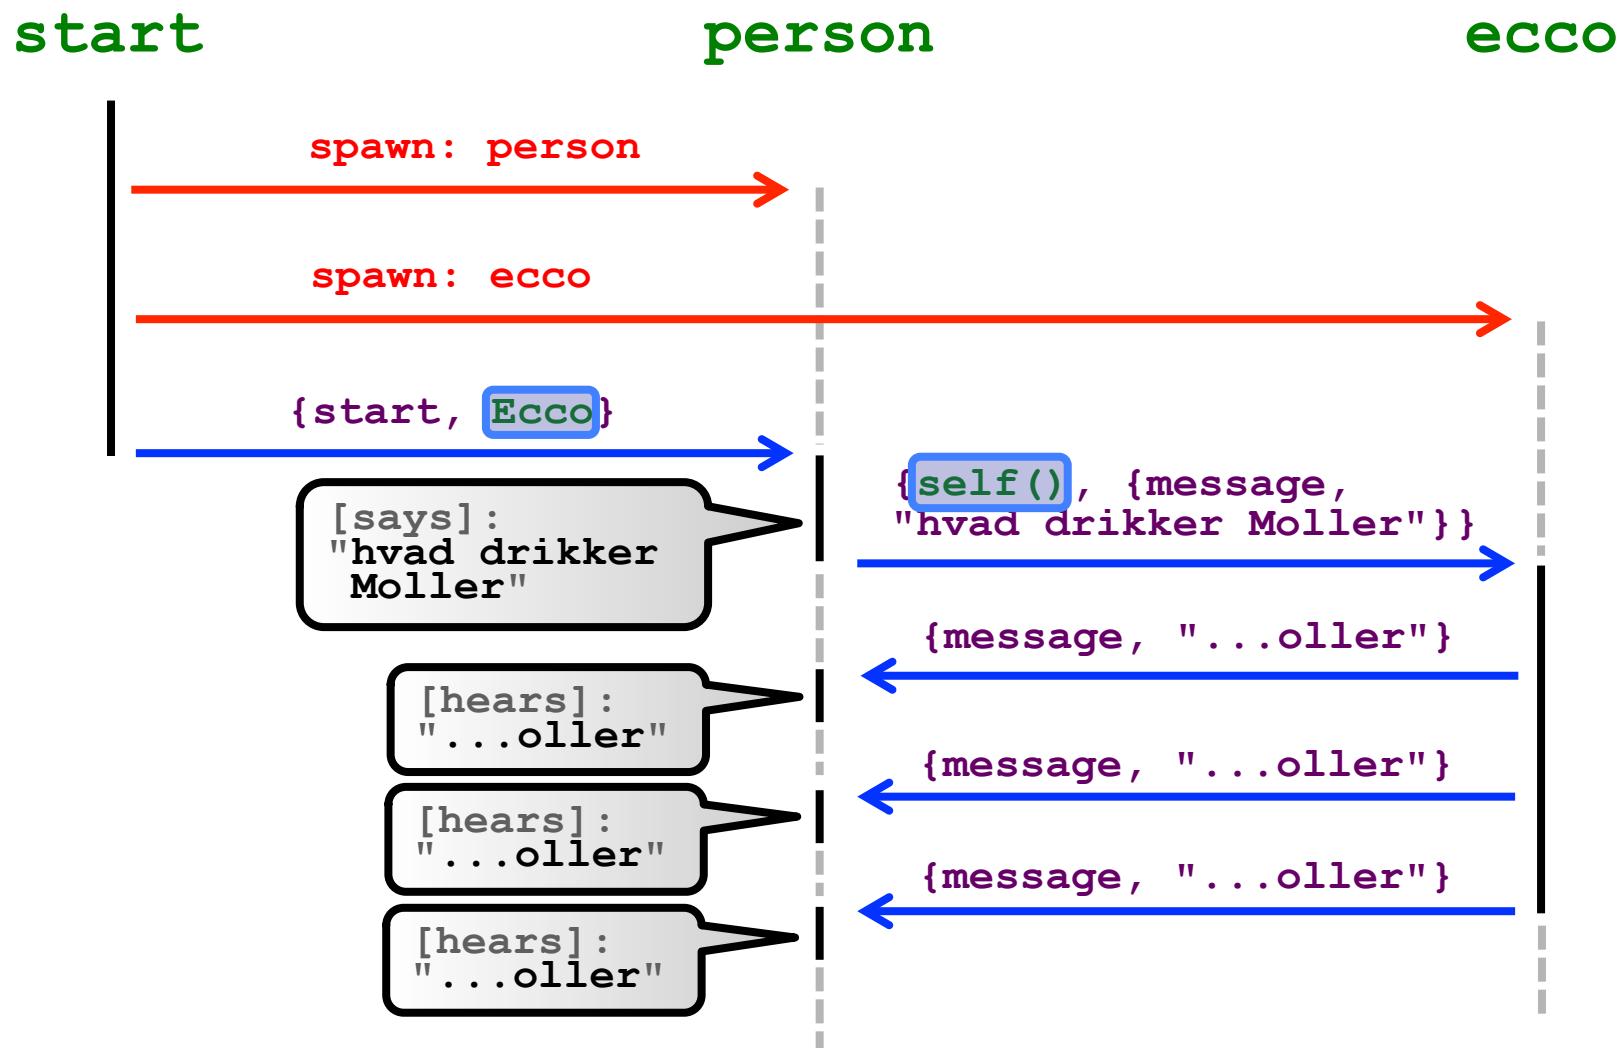

- [ <http://www.tordenskjoldssoldater.dk/ekko.html> ]

- Huge graffiti in Nordhavnen, Copenhagen:

[ <https://www.flickr.com/photos/unacivetta/5745925102/> ]

## 2) Ecco

## 2) Ecco.erl

```

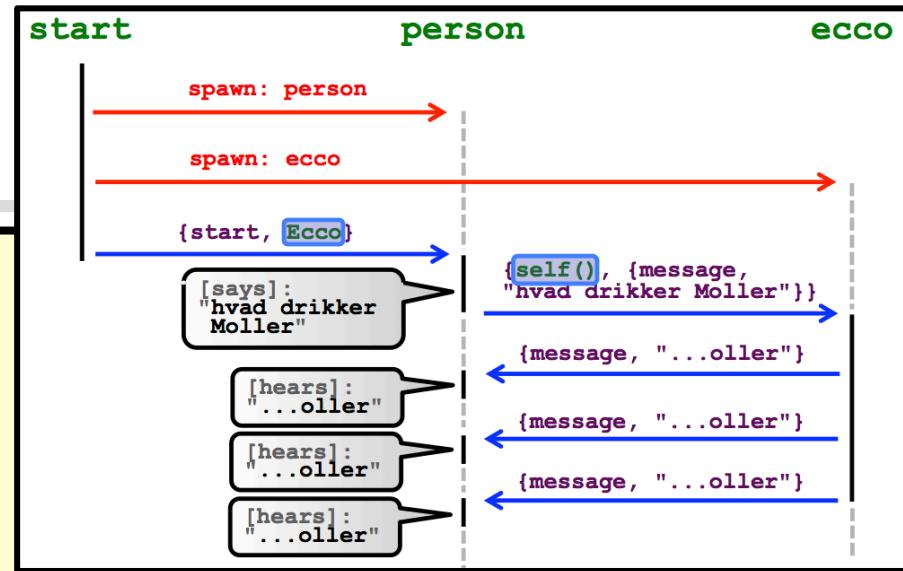

-module(helloworld).
-export([start/0, person/0, ecco/0]).

person() ->
    receive
        {start, Pid} ->
            S = "hvad drikker Moller",
            io:fwrite("[says]: " ++ S ++ "\n"),
            Pid ! {self(), {message, S}} ;
        {message, S} ->
            io:fwrite("[hears]: " ++ S ++ "\n")
    end,
    person().

ecco() ->
    receive
        {Sender, {message, S}} ->
            Sub = substr(S),
            Sender ! {message, Sub},
            Sender ! {message, Sub},
            Sender ! {message, Sub},
            ecco()
    end.

start() ->
    Person = spawn(helloworld, person, []),
    Ecco = spawn(helloworld, ecco, []),
    Person ! {start, Ecco}.

```

```

substr(S) when length(S) < 6 -> "..." ++ S;
substr([_|T]) -> substr(T).

```

```

[says]: hvad drikker Moller
[hears]: ...oller
[hears]: ...oller
[hears]: ...oller

```

## 2) Ecco.java

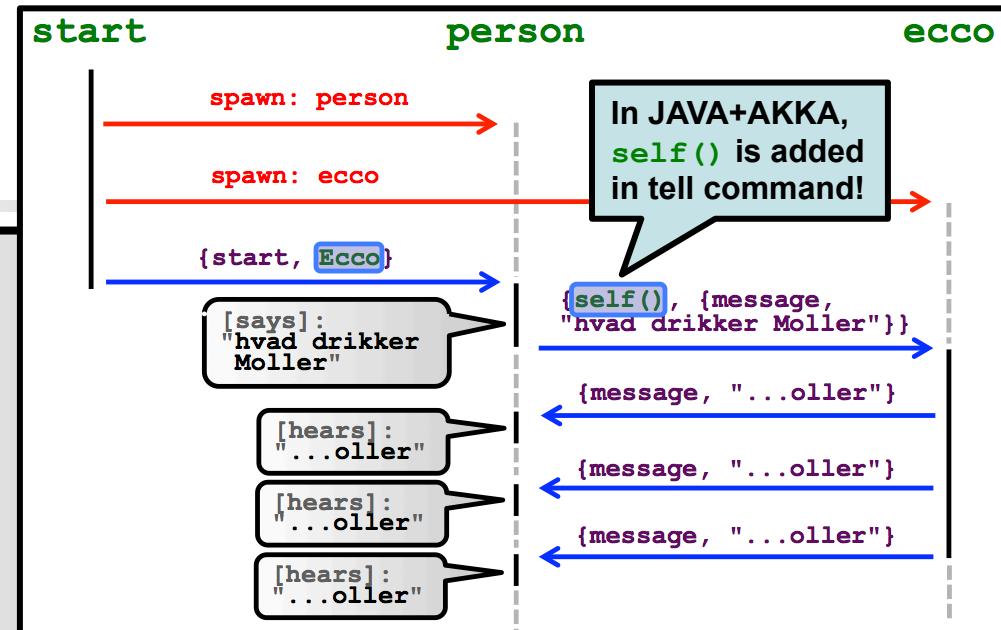

```
import java.io.*;
import akka.actor.*;
```

```
// -- MESSAGES --

class StartMessage implements Serializable {
    public final ActorRef ecco;
    public StartMessage(ActorRef ecco) {
        this.ecco = ecco;
    }
}

class Message implements Serializable {
    public final String s;
    public Message(String s) {
        this.s = s;
    }
}
```

Used for...:  
**person ← ecco**  
...and also for:  
**person → ecco**

[says]: hvad drikker Moller  
[hears]: ...oller  
[hears]: ...oller  
[hears]: ...oller

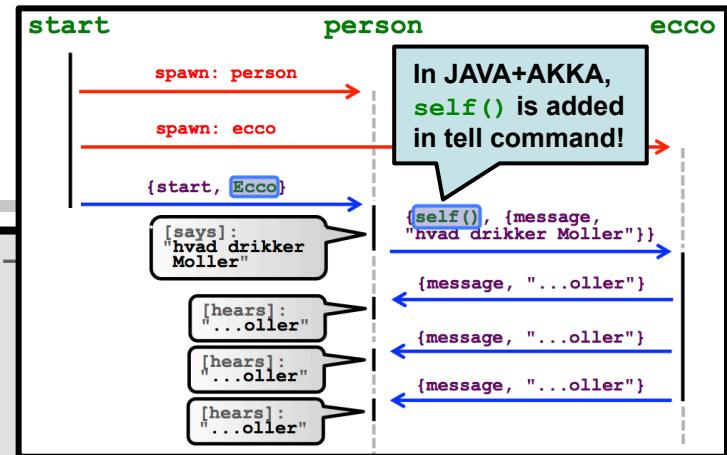

## 2) Ecco.java

```
// -- ACTORS --

class PersonActor extends UntypedActor {
    public void onReceive(Object o) throws Exception {
        if (o instanceof StartMessage) {
            StartMessage start = (StartMessage) o;
            ActorRef echo = start.echo;
            String s = "hvad drikker moller";
            System.out.println("[says]: " + s);
            echo.tell(new Message(s), getSelf());
        } else if (o instanceof Message) {
            Message m = (Message) o;
            System.out.println("[hears]: " + m.s);
        }
    }
}

class EccoActor extends UntypedActor {
    public void onReceive(Object o) throws Exception {
        if (o instanceof Message) {
            Message m = (Message) o;
            String s = m.s;
            Message reply;
            if (s.length()>5) reply = new Message("..." + s.substring(s.length()-5));
            else reply = new Message("...");
            getSender().tell(reply, getSelf());
            getSender().tell(reply, getSelf());
            getSender().tell(reply, getSelf());
        }
    }
}
```

Here, could also have been:  
ActorRef.noSender()

[says]: hvad drikker Moller  
 [hears]: ...oller  
 [hears]: ...oller  
 [hears]: ...oller

## 2) Ecco.java

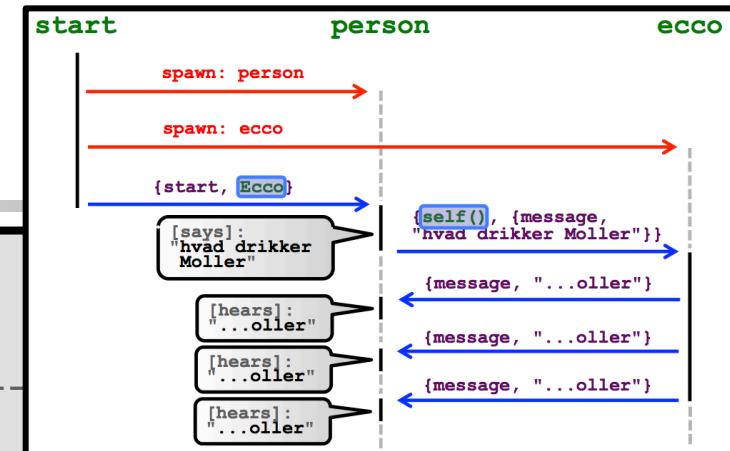

```
// -- MAIN --
public class Ecco {

## MANDATORY HAND-IN!

### a) Color ABC.erl

(according to color convention):

**send, receive, msgs  
actors, spawn, rest.**

(try 2 B as consistent as possible)

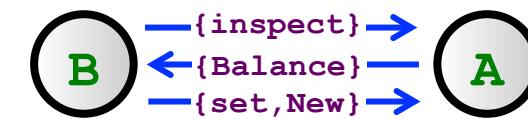

### b) Implement ABC.java

(as close to ABC.erl as possible)

### c) Answer question:

What happens if we replace  
**{deposit, ±Amount}** w/ the msgs?:

*** OUTPUT ***
<pre> Press return to inspect... Press return to terminate... Balance = 42 Balance = -42 </pre>

**Thx!**

*Questions?*
